

How to read email written in Vietnamese Unicode.

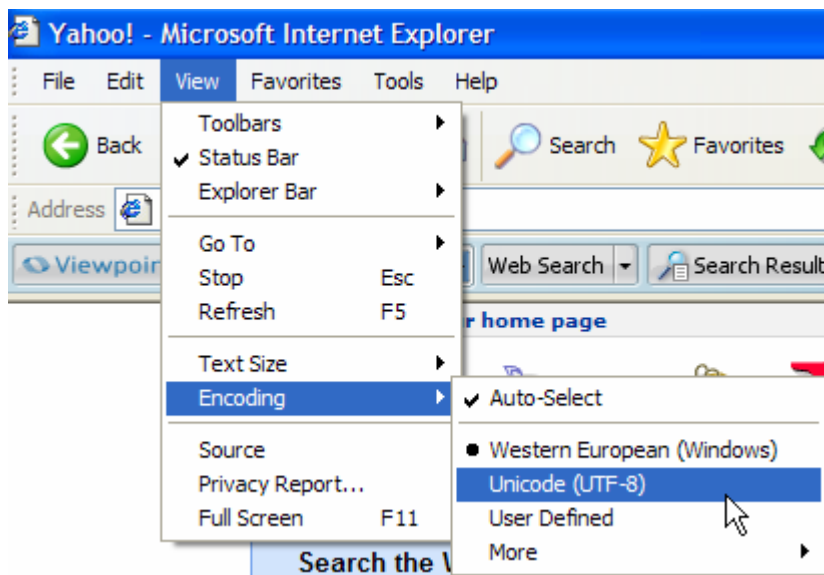

– compiled by Dacco -

If you can't read email written in Vietnamese and displayed correctly as it is supposed to, I guess you don't have the right encoding settings in your Yahoo which allowing to just that. Pls follow the below steps:

- for the people who use **M/S Internet Explorer** web browser (Version 6.0).

1-go to *Menu bar* > *View* > *Encoding* > select **Auto-Select** .

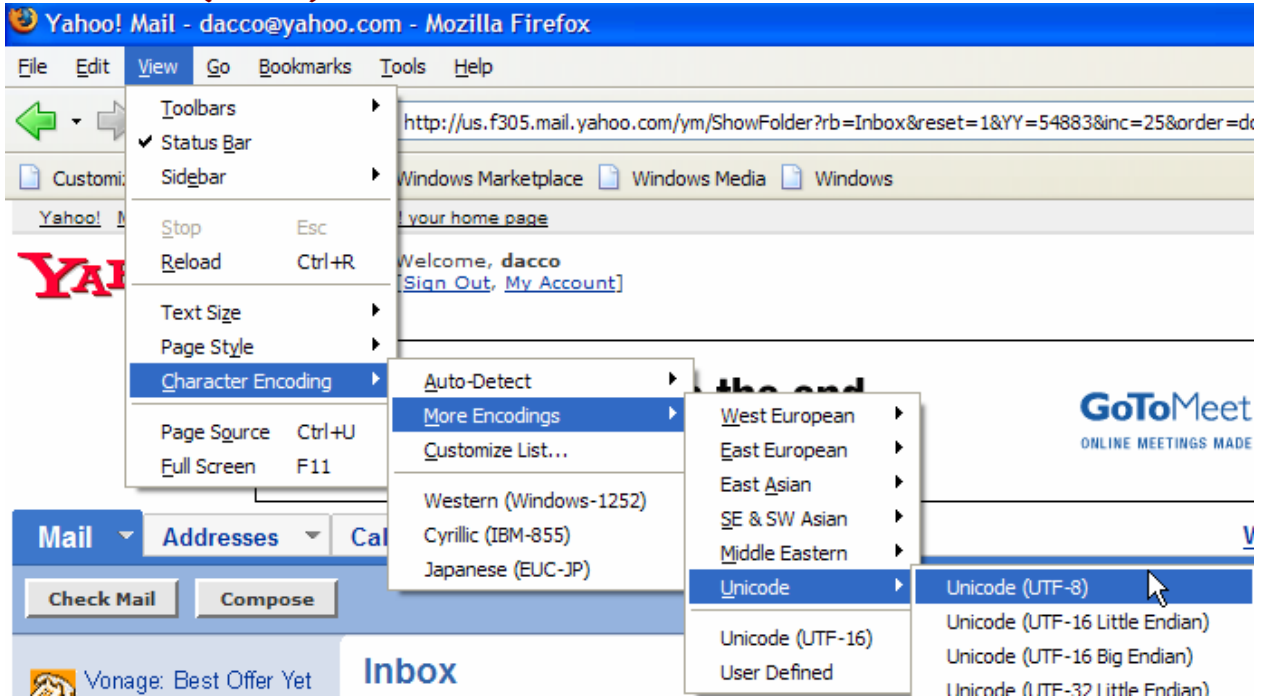

2-You also must have the following Encodings: *Unicode (UTF-8)* as follows:

Now open an email written in Vietnamese and test the new settings.

- for the people who use **Mozilla Firefox** web browser (Version 1.5.0.1).

1- go to Menu bar > View > Character Encoding > More Encodings > Unicode > **Unicode (UTF-8)**.

2- go to Menu bar > View > Character Encoding > **Auto Detect** > **Universal**
